

IP100 PROVIDES ARBITRATION FOR CENTRALIZED eFCAS

Directive D17 requires specific record details. EPAP prescribes process and controls for measurement and reporting. eFCAS can be used as business tool to meet this requirement.

A centralized eFCAS Host performs measurement and reporting functions. eFCAS Host talks directly to devices with IP100 to provide arbitration. Direct communications to devices allows the system to retrieve and store original data from devices and process. Existing Field SCADA Hosts for operations are retained for the purpose of alarm management, remote controls, and operational trending
