

SCADA-VPN for Secure Remote PLC Network Access

The SCADALink SCADA-VPN Appliance is used to provide secure VPN access to remote PLC/Control networks for purposes of SCADA data communications, commissioning, maintenance and troubleshooting.

The SCADA-VPN has The ability to remotely enable and disable VPN access; and to provide time-limited network access.

The SCADALink-VPN can function over WAN, cellular, and satellite networks with both static and dynamic IP addresses.
