

UT 6602 / ET 3300 Series Encrypted Ethernet Tunnel for Secure Ethernet Access

The UT and ET series of internet appliances such as the UT6602 encrypted UDP Ethernet Tunnel or UT3302 provide secure state-of-the-art AES encryption without the configuration complexity of VPN.

These devices provide a secure AES Encrypted Ethernet Tunnel for private networks communicating over the public internet. It allows remote users secure access to industrial PLC networks for maintenance, upgrade or troubleshooting or Corporate LAN/WANs.

UT-Soft client software works in conjunction with UT-3300 or UT-6602 encryption servers. It allows a PC with the installed software to participate in the encrypted network without requiring additional hardware on the client side.

Secure Encrypted Access of PLC, RTU Networks for Remote SCADA Host or Programming / Diagnostic PC
